

AUTOMATE AN E-COMMERCE WEB APPLICATION

Step 1: Start the program

Step 2: Create a maven project.

Step 3: Open the pom.xml file, and add the necessary dependencies such as selenium and testing

Step 4: Now create the testing file by right clicking on the project in the project explorer and selecting testng->create TestNG class

Step 5: Develop the code for FlipkartAutomation to open flipkart and search iphone13 and also to implement scroll feature

Step 6: Save all the files

Step 7: Now run the test file by right clicking on the test file and select run as>run testng

Step 8: Now the webpage is automated and validated automatically and the product will be searched

Step 9: Check whether all the test cases are passed

Step 10: Capture the output in the form of screenshots

Step 11: Close the application.
